In the alarm time mode, the alarm-ON-mark disappears (the alarm is released) or appears each time the \( \mathbb{E} \) button is pressed.

Once the alarm is set, the electronic buzzer sounds for 30 seconds at the preset time until released.

To stop the buzzer while sounding, press the \( \mathbb{E} \) button. The alarm is released at the same time.

* If the \( \mathbb{E} \) button is pressed in this setting mode, all unset digits are automatically set to zero.

(Independent correction) Correction of any digit, if not required, can be skipped by pressing the \( \mathbb{E} \) button repeatedly in time/calendar/alarm setting.

(Reversion to normal time display) The watch reverts to the normal time display if the \( \mathbb{E} \) button is pressed, regardless of the digit setting mode in time/calendar setting.

Calendar system: Auto-calendar pre-programmed until the year 2009.
